

Service Reels, Product Line

Using Nederman Service Reels is an easy, efficient and economical way to manage hoses and cables in your factories and workshops. The practical benefits of such a handy system are even greater in industries that use expensive hose and cables. Experience has shown, that the lifetime of a hose is 80% longer if it is suspended from a spring-loaded reel.

Why Use Service Reels:

Easier Cleaning: Keep your floors clean and free from clutter. Prevent accidents and make daily maintenance easier.

Less Wear and Tear: Wear and tear is caused mainly from mechanical damage. While on the floor, they are likely to be run over by forklifts and further damage may occur by debris being dropped on them. Hoses that are stored on hose reels last up to 5 times longer.

Greater Efficiency: Lightweight tools can be stored on the reel within easy reach when needed. This will eliminate hose and cables lying on the floor reducing tripping accidents or other accident caused by the improper storage of tools.

Less Risk of Accidents: Keep your floors clean and free from clutter. Prevent accidents and make daily maintenance easier.

Improving your workspace

882

The Series 882 is constructed of durable non-corrosive composite material that is guaranteed to perform for years. Its compact design and integrated wall bracket make it perfect in locations where space is a factor. This is the ideal hose reel for most compressed air needs. Typical applications include auto repair facilities, machine shops, home workshops or mount on a compressor to make a complete system.

883

The Series 883 is an enclosed Hose Reel, ideal for oil change, car repair facilities, municipalities and fleet maintenance garages. Perfect for oil, water, air, glycol and washer solvent. The range is 1/4", 3/8" and 1/2" with hose lengths up to 50'.

893

The Series 893 is the most versatile reel in the product line. It has various mounting configurations for wall, ceiling, and floor. An open design makes for easy cleaning. The composite drum is lightweight and corrosion resistant. The range for this model is 1/4", 3/8" and 1/2" with hose lengths up to 50'. **The Stainless Steel Alternative** - **The Series 893** is also available in stainless steel, where stringent hygiene is required. The drum, hardware and swivel are all stainless steel, which makes this the perfect reel for Pharmaceutical, Food Processing or any industry where corrosion prevention is required.

888/889

The **Series 888** with its sturdy construction The **Series 888** also has a composite drum, which makes the lightweight reel easy to mount. The outlet is adjustable up to 120° for optimal pull out angle. The range for the 889 is 1/4", 3/8", 1/2" with hose lengths up to 66'. **Series 889** is available for applications that require greater hose capacity.

884

The **Series 884** is the ultimate high capacity Hose Reel. With its sturdy construction and epoxy coating this reel is suitable for the harshest environments. The Series 884 will handle up to 1" I.D. hoses for a wide variety of fluids and pressures. The hose outlet is adjustable for optimal outlet angle.

884-Vacuum

The **Series 884 Vacuum Reel** has the same sturdy construction as its 884 counterpart. The Vacuum reel can accommodate 1.5" to 2" hose and lengths up to 33'. Ideal for floor cleaning, on-tool extraction for welding and sanding or removal of airborne particulate.

886

The **Series 886 HYGIENICREEL** is the Ultimate Stainless Steel Hose Reel. There is no comparison when it comes to this model.

The **Series 886 HYGIENICREEL** is designed for easy cleaning and corrosion resistant applications. The smooth simple design with its sloping surfaces and increased distance between the bracket and the drum makes the reel simple

to clean. The hose outlet can be easily dismantled for cleaning. The **Series 886 HYGIENICREEL** is designed with all its vital moving parts inside a water-tight cavity and is well protected.
